

SECURE EVERY HEARTBIT.

Your business is a living thing. Ours is to help you safeguard its growth.

Delivering ubiquitous by design software
to enhance security, eliminate risk
and empower development

UBITECH is a leading, innovative software house, systems integrator and technology provider, established to provide cutting edge intelligent technical solutions and consulting services to businesses, organizations and governments. Having delivered numerous mission-critical IT projects in several domains such as finance, retail, banking, security, etc. while staying active in the fields of high-end research and innovation, UBITECH has acquired significant and invaluable experience and technological know-how.

Staying true to its founding vision to "enable secure access to any service, data and information anytime, anywhere", UBITECH offers four leading, innovative and extensible software solutions in the fields of enterprise risk management and security governance, data privacy and information security, and agile application development:

The optimum choice for regulating risk, protecting information, preserving privacy and safeguarding continuity

OLISTIC is a web browser-based software solution that enables organizations to achieve all possible benefits from an enterprise risk management process. It supports multiple risk management processes through a friendly and intuitive user interface designed for different groups participating in them.

Adopt the sophisticated paradigm in creating reconfigurable-by-design distributed applications

MAESTRO is a software framework for the development and orchestration of distributed applications. It combines a software development toolkit (SDK) and an orchestrator. MAESTRO SDK comes with a web-based integrated development environment (IDE) for designing and developing distributed applications that follows a microservices-based development paradigm.

A reliable environment for the secure delivery of documents and data according to your own business rules

XCHANGE is a software platform that facilitates the secure interchange of structured and unstructured documents and data among trusted partners (e.g. individuals, enterprises, organizations, regions, countries). The platform integrates EJBCA, a powerful Public Key Infrastructure (PKI) that is the preferable choice for many European governments and ministries.

Unlock the power to enforce security and privacy in the cloud from the ground up

PAASWORD is a holistic data privacy and security-by-design Platform-as-a-Service (PaaS) framework that secures the protection of critical-mission data in the cloud and on premise. As a PaaS capability, it provides encrypted storage and context-aware access control in order to protect next generation cloud applications against internal and external adversaries.
